ICIDS 2026: Theme: "Integrating Technology and Sustainability: Pathways to a Clean Energy Future"

Conference Date: Friday & Saturday, 18th and 19th December 2026

Publishing Ethics Guidelines

Note to Authors

Papers submitted to the conference should be unpublished original work of the authors. They must not be under consideration for publication elsewhere. Any act of plagiarism or self-plagiarism will be unacceptable. The extended abstracts and final papers will undergo plagiarism checks.

Authors must obtain the necessary written permission to include materials that are owned and held in copyright by a third party. This includes text, images, illustrations, tables, or other material, including data. The use of any such material should be properly cited in all instances.

All individuals who have made a significant contribution to the Research should be listed as co-authors or acknowledged as appropriate. If the authors have received any financial support at any stage of the research, it should be disclosed and acknowledged.

Review Process

Original papers submitted to the conference will undergo a two-stage, double-blind peer-review process. A Scientific Committee, comprising senior academicians from various domains and institutions, has been constituted for this purpose. Additionally, track-specific Academic Review Committees (ARCs) consisting of academics with domain expertise have been formed. The conference will adhere to a blind review process, in which the identities of authors will not be disclosed to reviewers.

Each paper will undergo blind review by two ARC members, who will assess its quality across various parameters, including originality, motivation, methodology, contribution to existing research, completeness, etc., using a review form. Based on the recommendations of ARC members, the paper will be either accepted or rejected.
